BILLING PROCEDURES

APPENDIX A BILLING PROCEDURES

A1. Required Documents

a. Form J-2 (Intermodal Equipment Damage Form)

When repairs are covered by a Unit Damage Responsibility Report (Form J-2 or recorded image), an original, copy, or electronic image of such report <u>must accompany</u> the Unit Billing Repair Form.

A2. Repair Records

A repair record must be prepared when repairs of any kind are made.

a. Generation and Retention

When repairs are made to a foreign unit, an original record of repair must be made in detail at the unit and must be signed. A copy of the repair record must be submitted to the ramp office daily. The repair record **must be** maintained **by the local ramp supervision for at least 7 days** for comparison with the final invoice and work actually performed on the unit.

b. Required Information

The following basic information is common to both the original record of repairs and the Unit Billing Repair Form and **must be** shown at all times:

- (1) Reporting marks (unit initials)
- (2) Unit number
- (3) Date repairs completed (Mo-Day-Year)
- (4) Repair point locations (Standard Point Location Code, SPLC)

HANDLING HAZARDOUS MATERIALS – Intermodal Gate Operations 49 CFR Part 172.704

Training (introduction item #3); only if hazardous material come through the facility

Gate Clerk -- trained & tested within 90 days & every 3year

- a. General awareness/familiarization training
- b. Function-specific training
- c. Safety training
- d. Security awareness training and in-depth security training, as applicable

NOTES:

Intermodal Inspection Worksheet

Car Inspection

- a) Number of cars inspected Outbound _____
- b) Number of TOFC _____ COFC _____
- c) Units checked for 5 year out-of-date air test?

Inspection of Car Structure

- d) Center sills, end sills, side sills, body bolsters, side bearings, center plates, decks, draft sills?
- e) Wheel sets inspected for defects listed in Rule 36, 37, 41, 43 and 90 (Field Manual)? Are WM 61 wheels being replaced if that truck is jacked for another reason per Rule 41.A.3.a?

Trucks

f) Side Frames and Bolsters inspected for defects?

Load Securement

- g) Container pedestals and hitch components inspected for missing components and cracked securements?
- h) Trailer hitches lube in date? Screw type 6 months. Non-retractable 18 months.
- i) TOFC/COFC Interchange Rules?

Safety Appliances

- j) Ladders, ladder treads, handholds, and sill steps inspected for defects?
- k) Running boards, dome platforms, brake steps and crossover platforms inspected for defects.

Initial Terminal Air Brake Test

- 1) Train brake air system charged properly with retaining valves and valve pipes in good condition?
- m) Train charged to 15 psi of feed valve setting but not less than 75 psi at the end of the train?
- n) 20 psi reduction made and leakage reported?

- o) Proper inspection of train brakes? (shoes and lever angularity)
- p) Piston travel inspected for proper operating range?
- q) Release signal for brakes given and proper notification of test completion?
- r) EOT device applied and in compliance? (may or may-not be on at time of inspection)
- s) Test device in date? (92 day in-service / time-o-tester)
- t) Other?
